QR Code Link to This Post I have a very small router job that consists of 3 pieces that I'd like to put a small radius on. The 3 pieces are HDPE plastic, which cuts fast and easy. I need to put a radius along 2 lengths of each piece, so 6 quick runs across the router bit and that's it. Should go super fast, you'll make \$20 for 2 minutes of work. You must have a 3/16" or perhaps a 1/4" roundover bit to complete this small job; 3/16" is preferred.

FYI, the pieces are 1" x 3" planks, 2 of them are about 3 feet long and the 3rd piece is a bit shorter; the 2 longer pieces have a small curve to them, but these are flexible, so can be bent if necessary. Router bit should be just as.
