QR Code Link to This Post We have all been there, you just found an amazing deal on a new cellphone. I bet it was even the color you wanted, wasn't it? Then you realize that the reason it was so great of a deal was, because its not actually useable.

I understand & I can completely sympathize with your frustration; however here is some good news!

I WILL buy your iCloud locked phone, Google bypass verification from you.

I am sure that just perked up your ears a little bit, but keep reading, because there is a catch here.

If you bring me your iCloud locked, Google Bypass Verification, or stolen phone I will accept it, no questions asked. I then contact the previous owner, if they want the phone returned I give it back to them. If they issue the reward, I will give that to you minus cost. (Cost ranges between \$2.50- \$20.00 depending on how hard they are to track down.)

If they don't want it back and agree to unlock it, the phone is yours to keep you just pay cost. (Cost ranges between \$2.50- \$20.00 depending on how hard they are to track down.)

If I can't get ahold of them after three weeks, you owe me nothing! Plus I will buy the phone from you so I can continue to try and find the rightful owner.

I am offering this service because I know that many people have already spent so much on these stolen phones. 3/5 times the owners are willing to unlock the phone and are just grateful to know that someone reached out. 1/5 owners who are contacted offer rewards to the people who returned them.

I have a strict no questions asked policy. I know many of you would rather just get a bad iCloud, GFR, carrier restricted, or carrier unlocked phone out of your hair. I am

more than willing to just buy it from you and to let the

for a price of what I will buy the phones for. I will send me

If you need any other services please also feel free to get ahold of me.

I offer reasonable rates of

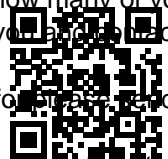

Carrier Unlock

Removing unpaid phone restrictions

Root & Custom rom flash

Removal of iCloud/ GFR

I am also pretty good at fixing other random software glitches.
