Hey fellow Milwaukeeans! There's a cute, quirky, non-graphic gay romance novel called "Dog & Pony" that takes place right here in Milwaukee, Wisconsin and it's available on Kindle right now!

Don't worry, it's not overly graphic or sexually explicit. It's more about the characters with Wisconsin as the backdrop.

Josh Bennett, hard working TV producer for a quirky morning show in Milwaukee, Wisconsin meets his match in new co-host Tyler Dash. Josh, who is out of the closet and comfortable in his own skin, tries his best not to fall helplessly in love with Tyler; a man so deep in the closet that it would take a mining crew to suss him out. What follows is a cute, quirky, awkward and sometimes painful path that they find themselves traversing while trying to make things work.

It doesn't help (or does it?) that WPUD -- the small TV station they work at -- is a menagerie peopled with misfits and rejects from other local stations. Somehow by a wing and a prayer (and a good fire extinguisher) the motley crew manages to make the morning show work, albeit in a very bizarre way. All this combined makes for a wild, crazy, delicious and heart felt story of two people finding something in each other that they never expected --.
