Amazing webapp designer needed

Location   **Pennsylvania**
https://www.genclassifieds.com/x-260976-z

 I am the Administrative Asst to the music Director and department at my church. Currently we have been having trouble managing and communicating with each choir member and musician and contacting everyone via email,facebook and text.

 What I am seeking is a way to help manage and organize our music department so that way we can stay on top of things and communicate with each other in an easy, more efficient and accessible way. Originally I started off with setting up a free trial through choralize and groupanizer which are choir management programs. Here are the links below to give you a better insight:

 http://www.choralize.com/

 http://www.groupanizer.com/

 However even though they are easy to use they still don't come close to what I had in mind.
 What we need is a great website but works like a social media platform and is easy to use but you have the option to go straight to our public website or login to your own personal dashboard that's for choir members and musicians only.

 WEBSITE:

 *clean layout with a modern and updated look.

 *mobile friendly for all phones...

 *When you go to our website I would love for the first page to be the all about photos of the choir with music playing and in the middle of the page it always entering and you click it to go to the main page.

 ?CHOIR DASHBOARD LOGIN:

 This was the tricky part...

 What I loved about GROUPANIZER is that it has every feature that we need.
 FEATURES:
 *A Dashboard to Organize it All...

Customize the page that your members land on in your site, to show what's most important to you.

*Attendance Plans & Recording
Members can automaticallyregister their attendance plans through the site or their email.

*Centralized Email Lists
Create email groups that auto-update when users leave/join or change email address.

*A Sample Site to Get You Started
No inspiration? No problem! Your website comes fully set up with sample content to get you started.

*Fully Translatable
Now in English/German, and Swedish, Dutch, Finnish and French are in progress!

*Easy Editing!
No HTML or coding experience necessary - WYSIWIG editors make creating content a breeze!

* Ensemble Feature
Small groups can create and maintain their own page and blog within your chorus website.

?*?Multimedia Posting
Easily embed your YouTube and Vimeo videos of performances or choreo directly into your site.

?*?Online Repertoire
Organize and manage your repertoire and learning tracks online, in one place.

?*?Maintenance Included
From browser display issues to new releases, we keep your site maintained behind the scenes.

?*?Shared Calendar
Create events inviting members with RSVP ability, while keeping event info together in one place
? (PICTURE LABELED CALENDER I LIKE THIS LAYOUT)?

?*?Social Media Buttons
Link to
Facebook, Twitter, Pinterest, Google+ and other major social networks.

?*?Task Management
Quickly & easily create a project with multiple team leaders - track the status as tasks complete.

?My only problem was that the dashboard does not work well with the mobile phones and that was one feature from this program that we really needed. My question is can this be incorporated into the website or can we possibly develop an app that works for both iphone and android phone or tablet?

I know this may or may not be a lot of work and I don't know too much about what it costs financially to get something done like this but I am seeking the best offer and best prices.

All the best.

H.W.
