I am selling a Marshall JCM 2000 DSL-401 Guitar Amplifier. This is an awesome amp! I am only selling because I am Unemployed and I have two of these amps. I am only selling one. This amp has a Clean Channel, Overdrive Channel, & an Overdrive 2 Channel which gives the signal a whopping 20db Boost. It comes with the Footswitch. It has a Speaker Emulated DI Output, an Effects Loop, & onboard Reverb. It is a 40 Watt Tube Amp with 4 EL84 & 4 12AX7 Tubes. The beauty of a lower watt amp is you can drive it without being really loud. Don't get me wrong this amp is loud! But it doesn't have to be to get the great Marshall Tone that you expect. If you need to be louder you can either use the DI Output or mic it into the PA. I've only played out with it 4-5 times. It is in great shape, it has a couple of dings, as it is used. Marshall Switched to a more "electronic" amp for this model, this is no longer available. You will not be unhappy with this!
