Up for sale is my 2002 Polaris EDGE 600 XC SP with the M10 suspension. 90 % of the other ones listed on here have the base suspension which doesn't ride anywhere near as well! This is the only way to go when you care about a comfortable ride. The extra travel of the M10 makes long days enjoyable, and the reverse is an option again to not go without. The sled has just over 5,000 miles on it, with a fresh top end at the beginning of last season. This was precautionary rather than due to a problem (it is much easier to do rings and gaskets before a problem occurs). The sled has been female owned, and treated well. It does need a new track installed, but it will come with the sled and only takes your time to put it on. You could probably get a few rides out of it, but I would suggest doing it sooner than later.

The sled starts on the first few pulls, and runs like a champ. Snow is coming, get out and enjoy!
