Looking for someone to make a mysql database for me.

I have a lenox server with mysql php on it.

I need a data base made for my company that separate users can login, print and email invoice receipts ..enter data and cc cards. i need it to lock the record so only one user can edit a record at one time.

I need someone to come to my location , start on this asap ..

I also have a windows pro server if that is easier for you to make this database. I prefer the linux server but will use the windows pro server if needed.

You must have experience and be able to do this quick, real quick..

my old database program is run on old asp from like 9 years ago.. its slow and we are tired of it.

If you can work on this at my office it would help as i can explain what we need done and that way its done right the first time.

Are you fast? want to make extra money? then please reply with any questions you might have and your number..

Please do not reply if you cannot come and work on this at my office.
