Chrome bumpers, damaged bumper reinforcements (behind plastic bumpers), bumpers missing pieces of plastic, bumpers with broken tabs that attach bumper to car, caved in dents larger than about ten inches, cracks larger than ten inches. .

Dent Repair

Paint-less Dent Removal

If you have dents on your vehicle and the paint is not damaged, in most cases we can remove those with out having to paint the panel. Using a process called paint-less dent removal(PDR), we can access the dent from the inside of the panel and work the dent out. The advantages for using this technique are: cost efficient, saves time, no body filler used and it preserves your car's factory finish.

For smaller dents, this is always the most economical and time efficient solution. The cost in most cases is 75% to 80% less than a body shop would charge.

For larger dents, depending on the size and location, it is determined on a case by case situation. We have to take into account, what level of perfection you are expecting and is it going to be more time efficient than traditional body work and painting.

Auto Body Work and Painting

We offer this service when the panel is dented and paint repair is required. This process is performed the same way as a traditional body shop. We straighten the panel as much as possible, smooth out area using a body filler and block sanding, apply primer, wet sand, clean and prep, mix color by entering the paint code from your vehicle into our computer, apply base coat and clear coat, wet sand and buff if necessary.

If the damage is more extensive, you need panels replaced, or the damage is on the hood or roof of the vehicle...these jobs need to be performed at our shop. or a 2nd visit We can promise the best price in the shortest time in the business because we are by appointment only.

This means your car is not going to sit for a couple of days before we start on it. We work on your car from the time until it is finished. u could get a estimate
