Looking for a motivated, passionate developer to finish the last 10% of a beta product, work with testers and finish the complete web application specification.

You should be a self starter that doesn't require supervision and can work remote.

Experience with PHP and MySQL required. UI/UX experience a huge plus!

We are a startup. We don't have investors.

We are looking for folks who can see the vision, help execute and be rewarded accordingly. We are monetizing both short and long term.

Huge profit sharing.
