3 Panasonic DVD (, USD)

Location **Florida** https://www.genclassifieds.com/x-370808-z

I have three unused DVD-RAM disks for sale. Each one is model LM-AB120LU. They are single sided (4.7GB), type 2, 2~3x speed disks.

\$12 obo for all three of them.

These disks would work great for backing up files that are on a laptop computer. The disks can be rewritten many times, and you could just keep one it the drive of your laptop.

If you don't know what DVD-RAM disks are, here is a summary:

DVD-RAM is probably best described as a removable storage device, rather than a traditional recordable DVD (like DVD+R or DVD-R). Think of a DVD-RAM disk as a hard drive the size of the other shiny coaster formats.

DVD-RAM is a DVD (optical disc) technology for high-capacity data storage for computers. Like ordinary random access memory (RAM), it can be repeatedly read, written to, and erased. Intended mostly for removable computer storage, DVD-RAM provides the capabilities of Rewriteable CD (CD-RW) - users can run programs from the discs, copy files to them and rewrite or delete them. However, with a storage capacity of up to 9.4 gigabytes (GB) per double-sided disc, DVD-RAM has many times the capacity of CD-RW.
