

# xcode objective c parse user login help

Location

Washington

<https://www.genclassifieds.com/x-373424-z>

first off i have no budget for this gig I'm trying to help the homeless, it seems like something simple and fast but i might be wrong , I'm just trying to get the login username Facebook/twitter login option backend done with parse a lot of it is already done i think there is just 1 bit of code left to paste into 1 dict header,lol but i don't know which 1, the project has been donated time from couple of developers thats why i sound like this but if someone could help it would be huge for us to make a little progress
