

# Need smallskinny person to install styrofoam rafter vents (44th St. amp McDowell)

Location **Arizona**  
<https://www.genclassifieds.com/x-374212-z>

Need small, skinny person to crawl around attic and install about 60 Styrofoam Rafter Vents (insulation baffles). These are 4' long by 2' wide Styrofoam vents that are pushed/ stapled into place. This job can be completed in an hour and a half. Early morning only so attic temperature is cool. I will have a disposable breathing mask for you.

Rafter vents ensure the soffit vents are clear and there is a channel for outside air to move into the attic at the soffits and out through the gable or ridge vent. To install the rafter vents, staple them directly to the roof decking. Rafter vents come in 4-foot lengths and 22-1/2 inch widths for rafter spacing. Rafter vents should be placed in your attic ceiling in between the rafters at the point where your attic ceiling meets your attic floor. Once they are in place, you can then place the batts or blankets, or blow insulation, right out to the very edge of the attic.
