I am looking for someone who can meet me in person, in Boston, to work with me on a small school project.

It involves creating a Python program that will connect to a database, retrieve information, display it on a web page, and allow the user to post, update, delete, information on the database directly from the web browser.

This project is not big and should take an experienced programmer at most a day to complete.

I would prefer to get help with it and be walked through how best to approach it but I am open to letting you do it your way if you would prefer.

Text me if you are interested and have time to.
