

Need a Simple Circuit Built (Wiscasset)

Location **Maine**
<https://www.genclassifieds.com/x-380645-z>

I need an expert electronics person to build (solder) a circuit from schematic.
The circuit uses transistors, bifilar coils, bridge diodes, 10k resistors, an LED power on light, an on-off switch and capacitors plus magnets. It runs off of 12 volts.

A signed non-disclosure agreement is required. If you are a skilled electronics technician, engineer or designer this is a cool gig and shouldn't take too long to build but pays well.

All components provided or will be ordered on your.
