I am developing a Wordpress site, and have a series of Woo plugins, some client portal and CRM software in place, and need help finishing the last bits, making the design pop, create some nice client portal pages, and do custom group auth based product/price lists. Would like to get SafeFunds escrow gateway option set for woo as well. I am 80% done and not a dumbass - I would like to hire you to work with me on Team Viewer and a bring a mic. I'm needing this 4-23 to 4-30, and can work with off-business hours if needed. We should bang it out in 10 hrs max if you know what you're doing. Could have good follow-on work as we develop new product sites regularly, local is good but not required.
