Need a mobile mechanic to come install a distributor, wires, plugs and new coil in a 94 S10 blazer. I have all the parts Must have your own tools and references.

Distributor was pulled and new put in, but it is off and won't start.... I got called in for a second job and don't have time to mess with it. Truck ran fine when I pulled the original distributor (other than pickup coil was bad) so I know it runs... just off in timing... all you need to do is rotate engine to TDC #1 and install distributor to match and install new coil. Engine is a Vortec 4.3L so the computer will set timing once it's running.

Send me an email with an estimate and when you are available, Saturday is probably the earliest I can be home while you work on.
