Do you suffer from the sharp pain, swelling, and tenderness of gout? Do you have a history of heart disease?

Highland Clinical Research is currently enrolling patients in a research study for those with gout and a history of heart disease.

If you are a male 50 or older, or a female 55 or older, have been diagnosed with gout, and have a history of heart disease or diabetes, you may qualify to participate.

Study participants will receive study related medications, full study-related medical exams, and EKG tests at no cost. Compensation for time and travel may also be available to those who qualify.

If you are interested in participating, call Highland Clinical Research at or visit goutresearch.org.
