EZMT has a removable insert for front and rear of feeder wagon.
Removable inserts for front and rear of feeder wagon

"The strongest & most versatile feeder wagon made anywhere"

This revolutionary new feeder uses hydraulics to dump the trailer floor on each side for easy clean out. This feature makes cleaning out an EZMT feeder faster and easier than any other feeder on the market. A hydraulic cylinder located at the front of the feeder is powered by the hydraulics on your tractor or hydraulic truck bed. No more wasted time spent pitching sticks and crusted hay out of your feeder by hand, with the pull of the lever the EZMT sides and floor rotate to easily dump all leftover debris right onto the ground. The use of hydraulics also enables the EZMT feeder to adjust the width of the trailer to accommodate cows and calves. This design allows you to use the same feeder to efficiently feed any size animal.
