

Vehicle Mobile App

Location

Michigan

<https://www.genclassifieds.com/x-396387-z>

I need a Mobile App Developer who can build an android/iphone app that takes vehicle data (J1939/J1708 message) from a wifi capable device. Message is basically a CAN data bus message that is transmitted over wifi. The app will display some vehicle data (i.e. tire pressure, engine run time etc), disable text messaging while car is running and push the data message to cloud storage. I can provide API Library and sample code i.e apk.
