

DO YOUR GRAIN BINS LEAK (Statewide South Dakota)

Location

South Dakota

<https://www.genclassifieds.com/x-441364-z>

We have the solution, HOT rubber sealant, heated to 400 degree's. We pour it around the seam between the metal bin and concrete base. It provide's an instant and long lasting seal. This sealant will not dry out, will not crack or get hard like roofing tar. Stay's pliable even in the coldest winter weather. Will not soak up water like spray foam, bond's tighter, stronger and last longer then the white coating. Both of which will cause rust. The rubber seal will move with the expansion and contraction of the bin. We can repair rusted out area's and any sized hole or tear in the metal. We can seal any size crack's in the concrete base, inside or out. When we are through your bin is SEALED, even against insect's and rodent's. We have sealed over 100 bin's with total satisfaction from our customer's. We are a licensed company, in business since 1994 in South Dakota. We offer statewide service, and give price quote's over the phone, so call my cell phone and let me know what you have. Large quantity discount's available. Price's are per linial foot around circumferance of bin. One bin start's at \$4.75 per foot. Two or more bin's are \$4.25 per foot (diameter x 3.14 will give you the total feet of each bin). Price include's light cleaning and prep work. We have referance's in many county's in South Dakota, some you may know. Would be interested in bidding work in Minnesota, Iowa and Nebraska also. So call for a price quote, get on our list to get your bin's sealed RIGHT, and save some money before the price increase. Call John Gallagher: Office
