MongoDB JavaScript API (Remote)

Location **Illinois**
https://www.genclassifieds.com/x-443469-z

We are looking for someone fairly experienced to be able to help our back end team with some API development tasks. These entail analyzing and deriving business rules & logic and codifying them into routes. Our database is Mongo and we use Node, so we are a heavy JavaScript shop.

Please be able to refer to a few coding samples on GitHub. Remote is ok - we use Slack / Jira to.
