Ladies and gentlemen, what we have here is a fine piece of automotive technology. This beast is a 1987 but you wouldn't be able to tell if the paint wasn't so faded. It currently has 222k miles and as far as I can tell that seems to be pretty accurate.

She fires up and runs great just like all of these Hondas do. It shifts like it should and stops like it should. The power steering works but the A/C will need to be charged if you intend to impress your girlfriend with it. Oh and I'd recommend putting a radio in it, maybe something with an aux input to really get the ladies. She probably won't even notice that the taillight is out but the cops probably will so might want to take care of that too. If I was keeping it as a commuter I would put tires on it. They don't match and I wouldn't trust them on the highway for any significant distance.

Anyways, it's 900 bucks. Cash only and that price is firm. If you don't have cash, please don't contact me asking me to save it for you. First person to hand me \$900 gets it(not 850, not 875). Text me at

Thanks,  
Travis

P.S. - if you buy it to take it off lots of sweet jumps I'll gladly film it.

P.S.(again) - The cruise works too. Don't act like you're not.
