Take the pepper challenge

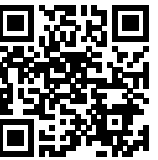

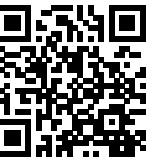

Volunteer to take the pepper challenge, post your video on you tube and nominate others to take the challenge as well. After the challenge folks will go to our fundraise page at:
<https://www.myfundingplace.com/charity-twenty-first-century-african-youth-movement-inc-39-1742519>
 and make a donation.

visit our site for details about our organization. <http://www.aym-inc.org/>

What AYM (African Youth Movement) wants to accomplish

The ultimate goal of AYM is to create a consistent source of employment for rural youth ages 15 -- 35 with the hope of increasing their quality of life through increased income. AYM is dedicated to creating gainful employment and entrepreneurial initiatives for rural youths across Africa by creating opportunities for jobs and entrepreneurship. It is one way to collectively reverse the social and economic marginalization of Africa.

What the future holds: 2014-2017

In the first three years -- 2014 to 2017, Key enterprises will be created in Matru Jong, Sierra Leone. The initial phases of Arts, Agriculture, and Tourism will be the focus. The goal is to create a consistent source of employment for rural youth ages 15 -- 35 with the hope of increasing their quality of life through increased income. AYM is dedicated to creating gainful employment and entrepreneurial initiatives for rural youths across Africa by creating opportunities for jobs and entrepreneurship. It is one way to collectively reverse the social and economic marginalization of Africa.

Matru Jong in the Bonthe District will serve as the global idea Hub for the AYM model encased in the Social Enterprise Center (SEC). The Social Enterprise Center will be the key administrative headquarters and incubator. From 2017 to 2019, AYM will replicate this model in Bombali District and from 2020 -- 2021, it will be replicated in the Kenema and Portoko districts.

Renewable energy in Sierra Leone

AYM has established a reliable and undisrupted source of electricity using solar, wind turbine and a back-up diesel generator to provide some reasonable Internet and technology access as well as building an efficiently centralized administrative system and business incubator. Key initial enterprises are presently functioning at the Social Enterprise Center. The goal is to roll out multiple predictable and projectable sources of funding.

Solar and wind turbines in Sierra Leone

The Social Enterprise Center currently provides the only 24/7 electricity in the whole of Mattru Jong, Sierra Leone, using solar and wind turbine. The purchase of a 5K diesel machine in November 2013 is a key move to stabilize our operations and allow AYM to realize projected monthly revenues from cell phone charging, sales of cell phone top-up units, sales of vegetables from our gardens and internet service.

The organization is rolling out new initiatives in 2015. These initiatives will expand existing enterprises and increase projected revenues in 2015. Our goal by the end of 2015 is to consistently maintain daily net revenue of one million Leones (\$250.00). This revenue will be reinvested in the community to expand our entrepreneur base, build more sources of revenue, create employment and develop the community.

Long term leased property and ecotourism

AYM is also a local NGO in Sierra Leone. It has a leased property in Mattru Jong that expires in 2031! The property is being used as an Administrative Headquarter, Social Enterprise Center and Business Incubator. AYM also has an informal arrangement with a landowning family to develop their property and promote Ecotourism and other related economic activities with the hope of purchasing the property when funds become available. The land is located along a beautifully clean river, beach and waterfalls. AYM envisages a local resort village on the land that would be opened to both local and international tourism.

AYM also has access to several acres of land for vegetable gardening and varied agricultural projects. From time-to-time, our volunteers from the United States meet up with our volunteers in Sierra Leone to work on projects and improve capacities to deliver services. We have just finalized a partnership to instal a cassava processing machine that would primarily produce fufu for commercial purposes.

Measuring AYM progress on goals

AYM means youth employment. Employment to increase the income of rural youth and an opportunity to increase their quality of life. We recognize that creating employment that would provide a living wage takes time with several factors coming into play. Identifying emerging opportunities in our rural areas of operation and responding with the right business idea is crucial. Recruiting, training and providing employment for rural youth is another task. Right now, we have some key enterprises with the potential to

expand in 2015. Our focus for this year is generating investment capital through these initial enterprises. This will help us start providing at least our first five full time paid jobs in January 2016.

Opportunities and Challenges

Opportunities abound for AYM in Sierra Leone, especially in the operational district of Bonthe. AYM has an administrative and business office in Mattru Jong with 24/7 electricity (partly from renewable energy sources such as wind turbines and solar). It also has a good relationship with the local leadership and access to land for ongoing agricultural programs.

The agriculture sector can absorb a greater number of unskilled youth. In 2007, AYM launched the Youth Vegetable Gardens in five communities in the District. Two hundred youth participated in the project. The vegetables were sold to Sierra Rutile, a neighboring mining company, through its hospitality management company, Allterrain Services Group (ATS).

The population of Mattru Jong is increasing by leaps and bounds. Many opportunities exist for business in food, education, recreation and entertainment sectors. AYM has positioned itself to start exploiting these opportunities to create jobs for the youth in the community.
