UNDERGROUND HOME INSPECTIONS...

Hawaii Private Locators LLC (HPL) is a new company formed locally to provide a unique service to all Hawaii homebuyers: Underground Home Inspections. Currently in the islands, there are only aboveground home inspections or termite inspections available to prospective property owners, but nothing belowground.

Hawaii Private Locators LLC uses sophisticated metal detectors, electromagnetic detectors utilizing radio frequencies and electromagnetic signals, and ground-penetrating radar to sense underground pipes, utility wires, lava tubes, old septic tanks, or other potentially hazardous voids, so homebuyers can be alerted before buying or building. Depending on the soil condition, this technologically advanced equipment might also be able to detect Hawaiian iwi so potential burial grounds will not be disturbed.

At the present time, government and commercial owners have access to these types of underground inspections, but private homebuyers do not. HPL seeks to fill this void, literally, or at least to discover it..... Know before you buy or build!
