On Site Dustless Blasting
 Is The Perfect Tool For Automotive Stripping.

Dustless Blasting solves the warping problem caused by sand blasting, and the paint adhesion problems caused by soda blasting! It's faster, cleaner and greener than any other paint stripping technology available. The outside of most cars can be completely stripped in about 2 hours. The removed paint and recycled glass will stay on the ground beneath and around the car. The easiest way we've found to clean up is to just put plastic down before blasting. After blasting, but preferably before the final rust inhibitor rinse down, just roll up the plastic and throw it away. Proper use of the rust inhibitor gives you up to 72 hours of rust resistance in ideal conditions, but it is recommended that you prime as soon as possible after blasting.

- FASTER Â The Dustless Blaster can strip a car in under 2 hours.
- MINIMAL DUST Â The abrasive gets trapped in water and grounded, eliminating the plume of dust.
- LOWER ABRASIVE CONSUPTION Â The Dustless Blaster uses less media to do more work.
- ABRASIVE FLEXIBILITY Â The Dustless Blaster can use almost any abrasive that sinks in water.
- NO WARPING Â The water prevents friction and won't warp thin metal like sandblasting will.
- DOESN'T AFFECT NEARBY WORKERS Â Never sacrifice productivity, other workers can work nearby unaffected.
- LEAVES A PAINT READY SURFACE Â The rust inhibitor decontaminates the metal leaving a clean,

chloride free paint ready surface.
