

Small Plumbing Job (Rio Verde (N. Scottsdale))

Location **Arizona**
<https://www.genclassifieds.com/x-466993-z>

I need someone who is capable of doing plumbing jobs. This job is to take an existing softwater loop and disconnect the main copper pipe (in water line) and plumb it to two whole house filters that I have already purchased along with mounting clips. (See images). I would like pressure gauges before and after the filters and shut off valves before and after for easy change of filters without having to depressurize the system. The line after the filters will return to the water softener. (I tried to draw this out)... of course would like to make it look neat, so open to editing.

As pictures show, I have all materials except copper pipe and fittings. Pressure gauges and shut off valves. You would purchase those and I could reimburse when paying for labor.

Let me know what a fair price for this would be.
