The Hexapack™ method of packaging can replace the need to wood crate items approximately 80% of the time. Using the latest technology in weight redistribution, when a large amount of weight or

pressure is applied to Hexapack, it maintains structure while protecting the item inside. Hexapack consists of a layer of hexagonal cells with foam in the interior. The cells are made of a strong, lightweight material, and the foam is made of a soft, cushioning material. This allows the Hexapack to absorb shock and vibration without the need for excessive packing materials.

Hexabox is the revolutionary, strong, lightweight, green solution for your packing needs. The entire box and wrapping is made out of recycled material. Lighter than wood crates, yet just as strong. Less waste and less shipping costs!
