Looking for auto mechanic to troubleshoot an electrical issue on a 1995 Ford F-150. I am willing to pay the right mechanic for their expertise, but I do not want to take it to a shop where the bill gets run sky high and the problem is not fixed. I have an electrical issue that hit or miss and I am at the end of my expertise with this truck. New coil, distributor, dis module, ect...nothing works. Located at a business in North Fargo, and have tools and indoor area to work in it if desired or needed. This is an older truck with only 130,000 miles on it and has value to me but not necessarily valuable so I don't want spend a million dollars on a 2,500.00 vehicle. I can also deliver the vehicle to you if preferred.

Thanks in advance for.
