I am looking for a short-term helper for about a month, this May turn into a permanent, full time position, but as of right now, I just need a guy who is looking for some extra summer work.

Basically, we sell aftermarket automotive accessories, like alarm systems, remote starters, relays, and other components with basic electrical or circuitry workings.

If you can't navigate the uses for IC timer chips off the shelf from radio shack, you may not be able to do this job. You should know their names, at least the most common ones, off the top of your head. You should know what a SPDT relay is. You should be familiar with wiring harnesses.

This would probably be a good position for someone who is an advanced stereo technician, and we may be able to accommodate a weekend only schedule, until we are caught up.
