Hello, I need to get my water pump and timing belt changed in my 2003 Galant ES it's a 4 cylinder and a automatic awd. I will buy the parts however I need someone with skill to replace it. So if you work or Parctice as a Machanic contact me. The timing belt is fine however if I'm going to get the water pump replace I might as well replace that also. The reason for the replacement is because the car has been attempting to run hot. As long as I'm driving it's cooling but when I'm at a traffic light the needle raises. I changed the termastat do to the old age but it still ran hot. I drained the radiator and replace the coolant and it still ran hot and that's when I started seeing red rusty color liquid draining from the reserve.
