The Carpet Cleaner That REALLY SUCKS!

All major carpet manufacturers agree that "hot water extraction (steam cleaning), with maximum moisture and residue removal" is the right way to care for their textiles.

If your carpet cleaner's equipment lacks suction power, there is likely dirt and countless other pollutants still lurking deep in your carpet. Many chemicals and machinery can loosen soils and stains. Massive suction, however, is the only source that can completely remove those loosened soils, stain material, chemical residues, pollutants and excess moisture from your home.

Effective cleaning is not simply loosening soils... it is actually removing those soils from your home and furnishings! With extreme suction, soils and stains are actually extracted and not left in the base of your carpet only to reappear later. This is why we choose the most powerful carpet cleaning systems and this is why you should choose the same!

Our machines have more suction power than other cleaning systems. This, along with our special blend of cleaning agents and high temperature water volume for rinsing is what constitutes the most thorough true "deep cleaning".

The great thing about the steaming hot water our systems creates is that it kills germs as we clean to

naturally sanitize your fabrics. This high temperature cleaning solution and massive suction will remove dust, dirt, bacteria, allergens, and pet dander from your carpets, upholstery, and drapery. No more allergens.

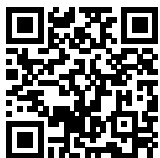

Our methods of cleaning your carpets will make them look like new and leave them so soft and clean that you'll want to walk on them every day. No more deep cleaning!

Want your carpets totally cleaned from top to bottom? Want them dry in half the time? Then insist on SUPERIOR FABRIC CLEANERS. The Carpet Cleaners That REALLY SUCK MORE!
