Excellent condition audiophile CD player (very hefty) can be used as front end of a high end audio system direct into an amp! Remote has integrated volume control.
Digital out for those with a favorite DAC.

Awesome sound quality using its own DAC. Retail was $5-600 new. Sounds great! Has been stored last 5+ years, installed new belts back in early 2000 sometime.

Cash only.

Denon 1500: a decent Denon model

This is a decent player, but it came along just before Denon decided to go all out, as they did with the far superior Denon 1500 II, which is utterly different. You can tell by weight alone: other Denon models were far heavier, which in a CD player is a sign of high quality. The inside components were greatly different too. If you can get a Denon 1500 II for half again what a Denon 1500 would cost you, you should go for it. Not that the 1500 is in any clear way a poor CD player. It's better than Denon models with smaller numbers, and in its time it may have been Denon's best. I guess it finally depends on how much quality you want/need and what you're willing to spend. I can recommend the Denon 1500 in this qualified way.

This unit is a great piece if your building a audiophile vintage system. It has fixed and variable sound output what is great. its a solid unit that is very rugged and looks good too. I have had one since 1987.
