QuickBase is a powerful and versatile web-based database system that is fairly easy to set up and use for simple database needs. But to realize its full potential for your business, you may need some expert assistance.

I have extensive working knowledge and experience with QuickBase. Whether you've just started using QuickBase and need help converting your existing data from a spreadsheet or other database, or if you've used the program for a while and now want to develop and automate sophisticated processes for your custom needs, I can help you.

- * Dynamic forms with embedded reports.
- * Automating QuickBase with formulas and programmed buttons that can do anything (create reports, add, edit, delete records, import data, export reports).
- * Automated emails based on data filters and user roles.
- * Mass importing and updating of records.

I can adapt a QuickBase template or build a custom application from scratch for management of inventory, sales leads, issues tracking, customers, documents, or project milestones. If you can imagine it, I can make QuickBase do it for you.

Please contact me for professional QuickBase help at a reasonable cost.
