Specializing in air-cooled VWs of any model, Bug, Ghia, Bus, Type 3, VW powered dune buggies or kit cars. If it has an air-cooled engine in it, or was built out of a Volkswagen, I can perform any kind of repair or restoration work needed. From general work such as tune ups, electrical system repair, or brake work, to interior/exterior finish work, and everything in between.

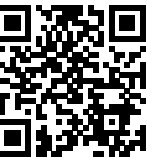

I also offer metal work and rust repair.

Need frame or suspension work on your rail buggy? I have extensive welding and fabrication experience building and repairing dune buggies.

Convertible VWs are NO problem. I have years of experience doing top frame repair and restoration. There are many convertible specific differences in the doors, windows, weather stripping/seals and body contruction. You won't find someone with more expertise concerning convertible VWs in the area!

Engine work from stock builds to big displacement turbo engines and everything in between. I have built hundreds of these engines and can recommend and build you a combination to suit street, strip, or off road. From the machine work, assembly, turbo system fab work, to carb tuning... I do it all.

I have over 15 years professional experience with air-cooled VWs. There isn't a nut, bolt, or screw that I haven't touched on these cars.
