Hi!

I make simple, out of the box websites for small businesses, that are mobile friendly. I also fix simple website problems you might have. I can set up hosting, a domain name, an email address, some nice SEO, social media accounts, etc.

If you just need a homepage, "About Us," Photos, Map, "Contact Us," and some links to social media, I'm your person.

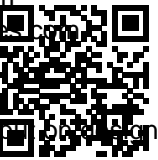

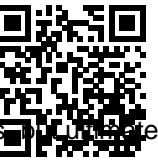

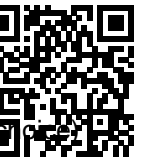

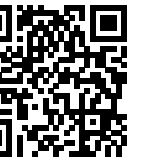

Separate fees that you will pay the vendor directly and separately, if you don't already have these things:

>>Your domain name will be from \$8-\$15 on average, per year, depending on how much the vendor charges for that particular name (check GoDaddy.com)

>>Your hosting will be \$8/month, paid annually to the vendor

I do everything myself - no outsourcing to countries that don't understand you. Everything will be under your name, and your control, and simple, so you can edit it in the future if you want to.

Here's some sites I have done or am working on:

What is the catch? Well, the sites have limited custom design capabilities, that's about it.

Thank you!
