Toyota Camry runs great and super cold AC it is an automatic , v6 no longer need this car the bad things are the paint is peeling and door handle has a little bit of a crack and has a crack on the windshield and it's going to need a new CV axle which is \$59 at autozone, yes you can drive the car I just drove it 80 miles to my house , from my uncle's house . the CV boot is torn which dirt and dust on inside which creates a squeaky vibration on the bearing . go google it and I'll show up on youtube how to replace it it's about a two hour job a car runs excellent besides that I am selling this as is with a little minor problem .If I fix it I will definitely raise the price up it should only take someone two hours to fix this and \$59. interior is excellent and has high mileage due to the owner driving 120 miles round trip on the freeway Monday through Friday so he could get to work. I am selling it for the owner , he does not live in this city give me a call or text title is
