I'm looking for a mobile mechanic to come to me to fix the problem of my 1995 Honda civic not starting. Here's what my problem is- car has a kill switch on it, the alarm is not letting us start the car(aftermarket alarm), the car is having some electrical/wiring problem.

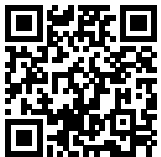

I've checked the battery and starter and they are just fine, checked the alternator and thats fine too. So we find the problem to be the wiring that connects to the kill switch and the lock cylinder (easy said than done). We connected the wires back but no power going to the vehicle.

Something is either wrong in the wiring or blocking power. I am willing to pay what your price and cost is. Again has to be a mobile mechanic due to the car not starting. My number is and my name is
