I have a 1995 toyota camry with 220k miles. 2.2 liter 4 cylinder engine, automatic transmission. Does not leak any fluids. Recent timing belt, brakes, ball joints, and fuel pump. Was running great until the other day. Stalled and won't start. Engine cranks over but doesn't start. Was told it could be the distributor. I don't have the time or space for it anymore. Body isn't great. Dings and dents, but solid. Email with any questions. will add pictures
