Whether your pulling, racing, towing, or just having fun - these turbos, with a 57mm billet compressor wheel, are an excellent performance upgrade for Dodge 5.9 Cummins trucks. They are not a "bolt on" upgrade. Some tuning may be required.

However the applications are not limited to a single use. I have known of people putting them on cars like Saabs and Mitsubishi's, all the way up to trucks and machinery.

The 14cm exhaust housing is a real breather for lowering your egt versus the 9cm, or 12cm housing.

The wastegate is adjustable. Affording you the control to set it where you please. Depending on what you are installing the turbo on some modification of the wastegate actuator may be necessary.

The silencer ring is installed. If you are one of those who likes turbo noise...well, turbo music! i.e. when your idling and you can just hear that beautiful turbine song, you may wish to remove it.

Holset has a world renowned reputation for quality turbochargers. We encourage viewers to check out the Holset website. Once there one may easily find information on how to identify a genuine Holset.
