New Hampshire<https://www.genclassifieds.com/x-679089-z>****PetSafe Wireless Pet Containment System, Model Number PIF-300****

New, OUT OF BOX. Price is FIRM, \$160.00, cash only.

Currently SAME EXACT item is selling at PetCo (where originally purchased), on sale, for well over \$160. Never used on our pet, only checked transmission to see if it worked. Ultimately we decided we didn't need it.

Includes ALL components:

Receiver Collar - NEVER USED

Power Adapter

Battery - Already installed

Test Light Tool

Transmitter

Operating and Training Guide

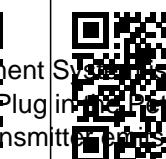

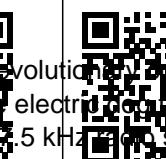

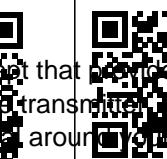

Fifty Boundary Flags - UNOPENED

Actual online description & details:

PetSafe Wireless Instant Fence Pet Containment System -- Wireless Dog Fence and PetSafe Electric**Dog Fence**

PetSafe Wireless Instant Fence Pet Containment System is a revolutionary concept that provides the easiest, simplest way to contain your dog. Plug in the PetSafe electric fence transmitter and you're unconsciously training your home. The transmitter emits a 45 kHz radio signal around your home. Your pet wears a lightweight receiver collar that "listens" for the signal. While the collar is receiving the signal, your dog is free to run and play in your yard. When he approaches the boundary of the signal area, he receives a warning beep. If your dog does not return, he will receive a static correction, which can be startling but not harmful. With a little simple training and help from this electric dog fence, your dog will quickly learn his boundaries.

Setting up your PetSafe Wireless Dog Fence is simple and takes just a few minutes, as the transmitter

for this wireless pet containment system plugs into any standard 110-volt outlet. Since the signal will transmit reliably through walls and other obstructions, it can be placed in any convenient or discreet location, typically in the garage or in a closet. Once you have set up this PetSafe electric dog fence, you can adjust the range that is appropriate for your dog and your yard. The signal field can be adjusted anywhere from a 30 to 180-foot diameter from the transmitter. Note that the system's signal is emitted in a circular shape and this shape cannot be changed.

Training your dog is important and now, with the PetSafe Wireless Instant Fence Pet Containment System, it can be done quickly and easily. Simply follow the training instructions that are included with your wireless fence system. Once the signal to the perimeter has been adjusted to your preferred setting, mark the boundary by placing the training flags at the edge of the signal. Every PetSafe Wireless Dog Fence comes with a transmitter, one receiver, 50 boundary flags for training your pet and a manual that explains installation and training. You can contain an unlimited number of pets using the PetSafe Wireless Dog Fence by purchasing additional PetSafe Wireless Receiver Collars.

The range of The PetSafe Wireless Instant Fence Pet Containment System can also be increased by using two or more transmitters. This creates a bigger boundary through multiple intersecting circles resulting from two transmitters. The signal is cancelled where the circles intersect, allowing the pet access to the entire area. The transmitters can be located a maximum of 150 feet apart and transmitters must be protected from weather, as they cannot get wet. An additional transmitter would create a boundary that is up to 180 feet wide and up to 330 feet long.
