

Traeger PB150 Pellet Water Boiler (3000 USD)

Location **Vermont**
<https://www.genclassifieds.com/x-683313-z>

This furnace is made by Pinnacle in Canada and is a dual fuel stove designed for wood pellets or corn. It has been in use four winters and had the agar motor and blower fan replaced last winter. It produces 85,000-130,000 btu and the hopper can hold 160 lbs (4bags) of pellets. We are getting rid of it because we are switching to a different type of heat source.
