After a long, hot and very dry summer the time is now to repair your lawn with the following services.

Core Aeration and overseeding is suggested this time of the season to help your roots get the correct air, water and nutrients that are necessary.

Dethatching- get your lawns healthier by ridding them of thatch. Which is a layer of dead grass and roots that can suffocate your lawn which makes it harder to achieve that healthy full green lawn.

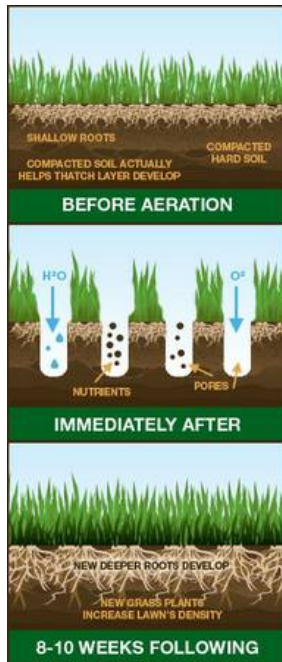

Winterization- autumn is the most crucial time to fertilize your lawn. It's during these cool months that your grass starts its storing process of all nutrients for the long harsh months ahead. By feeding your lawn with a fall winterizer you're helping your lawn for the early spring regrowth.
