QR Code Link to This Post 2016 is, or will be, near the peak of the cottontail rabbit cycle in the Natrona County area. The coming two years will in turn see an increase in coyote populations. A large food supply coupled with the current mild winter weather will work to produce positive conditions for improved numbers of coyotes. I am offering to hunt coyotes to remove them from your land and help protect your livestock from the spread of disease and predation. I am looking for landowners in Natrona County or neighboring counties who have been overrun with coyotes and are wish to reduce their numbers at an affordable price. My offer is to remove coyotes via hunting during the weekends on either a per coyote fee with proof of kill or a daily rate, either of which will be negotiated. If you wish to contract my services please feel free to contact me through CL providing your contact details to set up service today. Thank.
