QR Code Link to This Post Anyone want to collaborate on some electronic music? I'm 24, I live on the eastside, and I make beats, mostly leaning towards hip hop but with some influences from footwork, noise, and ambient music, among others. My influences are things like Tobacco, Dan Deacon, Death Grips, Boards of Canada, The Orb, J Dilla, Flying Lotus, and DJ Rashad. I don't have a specific idea for a project in mind, I'm just looking for open minded collaborators who want to do something original.

I mostly use hardware to make music, which means there a lot of possibilities for making music. It would make it super easy to collaborate with live musicians, DJ's, or producers's, and I'm open to all possibilities. I'd be particularly interested in doing a computer-less electronic project, if anyone else is into that kind of thing.

I'm not trying to get big or make super professional sounding music, I just want to have some fun. I'd even be open to just sending bits of songs back and forth with another bored musician, so don't hesitate to contact me,
