QR Code Link to This Post Hello, I am slowly building a 2005 Mazda 6 while I continue school. I still have a ways to go on replacing most mechanical components, but I am making progress when I can. For instance, I painted the car, replaced the suspension, rims, tires, sensors, water pump, seats, axles, lights, and a bunch of other things.

I still need to replace the inner/outer tie rod ends; upper/lower control arms; front strut mounts; and exhaust to get her to pristine condition. After this is done, I will need another complete paint job and rewire certain things for enhanced use.

Currently, I am looking for a few things to improve the overall look of the car, while more parts come in:

1. Black leather front seats that are in good condition.
2. Window trim mouldings and panels.
3. Rearview mirror in good condition.
4. Radio shark fin antenna.
5. Dash kit that fits a 2005 Mazda 6.

Any help finding these components is greatly!
