QR Code Link to This Post Are you having issues with your furnace? Perhaps the pilot light comes on and nothing else. Or how about the furnace comes on then when the blower comes on the fire goes out? Or just perhaps the furnace won't come on but the fan constantly blows? These are the most common symptoms of today's heating problems. I've seen it all and worked in 4 different states and I've seen every single make and model system for any sized building. Don't want to pay hundreds? My diagnostic or tune up service is just 60 dollars thats it. Also if you need a part you pay what I pay meaning I never mark up parts or upgrades for repairs or whole complete systems aswell you pay what I pay. I only charge a small labor fee on a job to job basis. I have all my proper paperwork and I am a registered DBA with oklahoma. Text for faster service or call

to get immediate same day service at no extra charge again my number is  
thank
