QR Code Link to This Post Hello Friends,

I have a few of these portable battery packs. They are new. Never opened. I got these as gifts earlier this year for people but decided to go with other things. This charger can charge your tablets or smartphones really well. They're pretty highly rated and go for about \$30 on Amazon. Compatible with Apple products and Android products as well. It comes with a Micro USB Cable and Mini USB power tip.

The device does not get hot while charging. FYI, a 6100 mAH can charge your smartphone about 3 times before the charger itself needs to be recharged. It can charge a tablet about 1.5 times.

I bought these originally for about \$35+tax each. They are in their original boxes so I think \$15 is fair. Let me know if you have questions! Thank.
