QR Code Link to This Post I have an old database built on MySQL. It works. I know there are a number of things to do. Right now though, I need someone to help create 2 extraction queries that show - work orders on a google map. I have 2 techs and they aren't the best at planning their routes based off just the database. Showing it on a map should help plan the day much better.

Is this something you can do? Please ask me questions as needed. I know there is a map API that should integrate.

How soon can you do it?

How much time (I have access to all MySQL files on server, etc.)?

Price estimate.

Thank.
