Plumbing Tips

- ï,§ Homeowners should consider replacing old water heaters, furnaces, toilets, or any other appliance with new high-efficiency or water-saving models. Periodically drain water from the bottom of your water heater to remove sediment. This will extend the life of your water heater.
- ï,§ Stop annoying water hammer noises by installing shock absorbers that absorb vibrations in water lines.
- ï,§ Use biodegradable soaps & detergents.
- ï, Toilets consume more than 40% of your total water usage. Installation of a new toilet flapper and fill valve will keep your toilet running efficiently.
- ï. Replacing an old shower head can save up to 7.5 gallons of water per minute without sacrificing full spray action at low or high water pressures.
- ï,§ Don't put up with any slowly dripping faucets. A slow drip can waste as much as 150 gallons og water each day or 4,500 gallons per month and will add to the water bill. !@!
