 New with box -- dog training obedience system

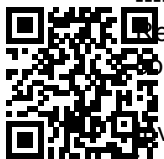

PetSafe Adventure Dog Remote Training Collar with tone and static stimulation

Retails at amazon for \$159.99+tax and at petco for \$189.99+tax.

Here's what I like about these units:

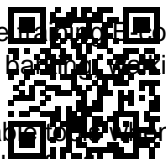

- Very well-built; rugged, to withstand impacts; quality materials feel substantial to the touch.
- Charge transmitter & receiver simultaneously w/included cable splitter;
- Consistent stimulation;
- Level 1 stimulation is almost not noticeable (the way it should be), & each level up gives a noticeable difference.
- Well-known brand... PetSafe has been around for a while... and is sold in many pet stores.

8 levels of stimulation plus two tone (sound) training options;
 Range up to 800 yards __--__ Waterproof (consider this as water-resistant, just to be safe);
 Adjustable collar (up to 28"), for small to large dogs...
 or just attach to your own collar for a custom fit.
 (optional: expand to 3 dogs w/extra receivers.)

Remote training collar system always has been on amazon. I have used it for correct training, leash training, sitting, standing, and other behavioral objectives. I evaluated it when I was doing professional dog training. It is invaluable for the conscientious home pet owner.

I've never needed shock. I have the lowest levels, for any dog. Obedient dogs need "vibration mode" only. Just to get the dog's focus back on the owner. Please read/watch (youtube it!) some educational material before getting started.. If requested, at time of pickup, I will demonstrate and explain how to use in a responsible manner and how to achieve the desired results. As always, all training tools require proper skill by the.
